

Before — the first session today

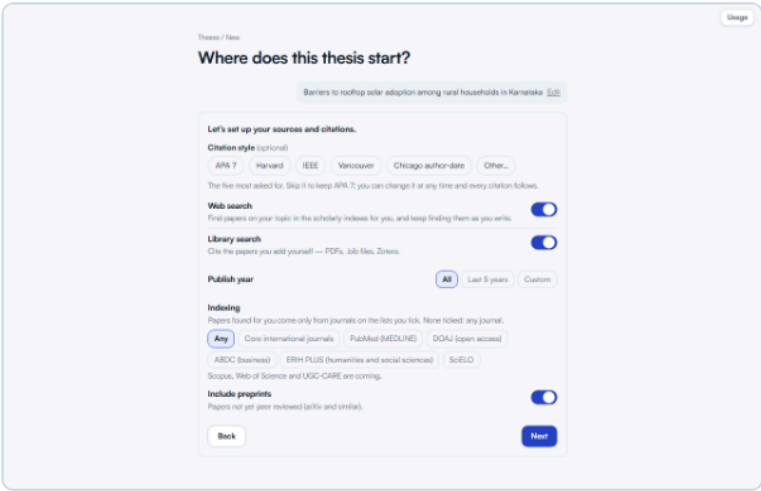

Setup in the editor • for the owner's approval • design only, nothing built

Today: four screens before the editor

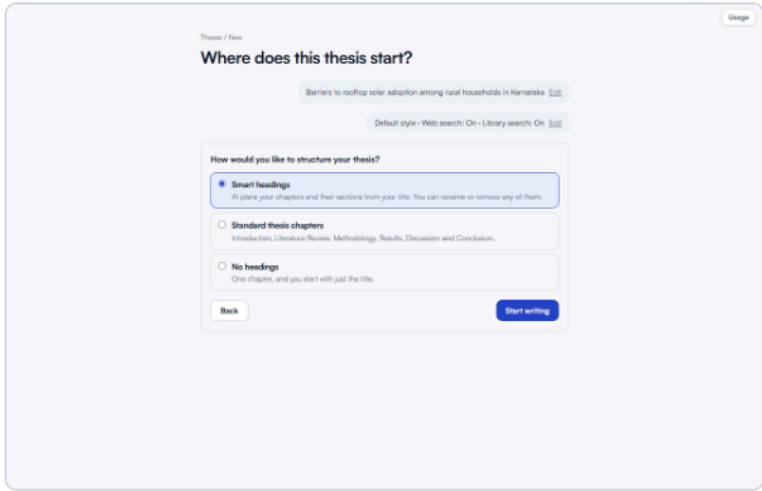

Taken from the dev stack on 2026-10-09 (v0.1.36, the calm editor), through Start writing now with the defaults. The dark label at the foot of screens 5 and 6 is a dev-only timing badge.

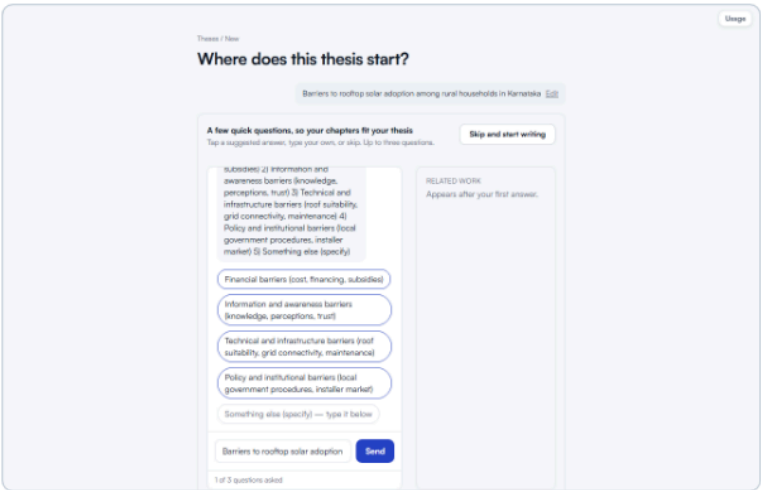

1 • /app/new. Paper or topic, working title, citation style; Start writing now, Continue (proposal), or Create and import from Word.

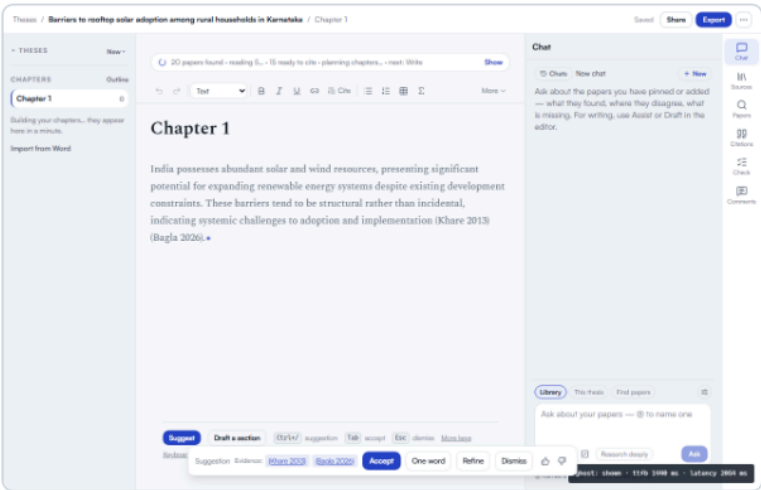

2 • Sources and citations. Style again, web and library search, years, indexing, preprints. Next.

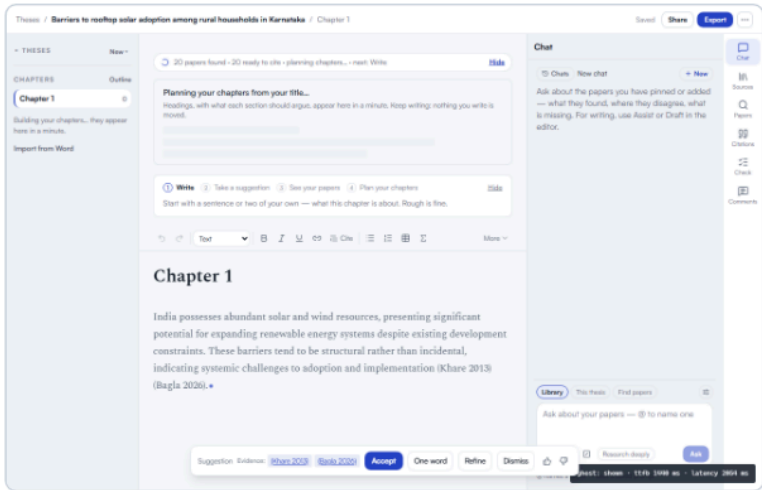

3 • Structure. Smart headings (default), Standard chapters, or no headings. Start writing creates the thesis.

4 • Start questions. Up to three proposal questions with suggested answers, or Skip and start writing.

5 • The editor. "Chapter 1"; the plan is still being built ("they appear here in a minute"); an opening sentence is offered, cited.

6 • Show. The plan card and the four-step guide (Write • Take a suggestion • See your papers • Plan your chapters) sit above the toolbar.

After — the same steps, inside the editor

New thesis opens the editor at once. A setup card sits at the top of the empty chapter; the chapters and their sections appear in the list and on the page as they are planned; the first cited sentence waits under the first heading. Shown at step 4 of 5.

1. Introduction

Problem statement and motivation

Rooftop solar has spread slowly among rural households in Karnataka despite falling panel prices, and the upfront cost and the paperwork for subsidy are the reasons households give most often (Khare 2013; Bagla 2026).

What moves where

Nothing is removed. Every step today is still reachable, most from the card itself.

Today	After	Calls (existing)
/app/new: paper or topic	Card step 1: "start from a paper I wrote" opens today's proposal screen (Path B upload); "plan with a full proposal" opens /proposal (Path A). /app/new stays for links and the New ▾ menu.	POST /documents • POST /documents/:id/seed-papers
Working title	Card step 1, typed in the editor. The thesis already exists as "Untitled thesis".	PUT /documents/:id/memory/scope (writes the title) — a title-only route is new
Create and import from Word	Card step 1 link, and Import from Word in the chapter list (as today).	POST /documents/:id/import-docx
Citation style (twice)	Card step 1, once.	PUT /documents/:id/citation-style
Sources and citations step	Card step 1, one folded line with Change; the same fields.	PUT /documents/:id/source-prefs
Paper search at creation	Starts when the title is confirmed (Next).	new: start the auto-sources run from the title route
(not asked today)	Card step 2: field and university, optional, guessed from the title.	Document.field exists; university and the guess are new
Structure step	Card step 4: Keep these chapters • Standard chapters • No headings • Edit the outline.	POST outline/plan-from-title • PUT /documents/:id/memory/outline
Start questions	Card step 3, the same conversation, one question at a time, or Skip.	GET/POST /documents/:id/proposal • PUT memory/scope • POST outline/generate
"Planning your chapters..." card	Chapters and sections fill the chapter list and the page in place (the section guide already lays headings into a blank chapter).	GET /documents/:id/outline
Four-step guide	Steps 4—5 of the card cover write and suggest; the guide stays under Show and ⋯ → First steps.	none (local)
First suggestion	Card step 5: the opener under the first heading, with the suggestion bar.	POST /assist/suggest • GET /documents/:id/sources/progress

Estimate: about 4—5 working days of build and 1 day of browser proof (layout audit at five widths, the first-session measurement, the e2e specs that use /app/new). Details, risks and what is new are in docs/design/setup-in-editor/NOTES.md.
