Thesis Copilot for Chrome 0.4.0 — for review

ADR-0156. Real Chromium with the built add-on loaded; the sites are answered with hand-written fixtures and Thesis Copilot by a local stand-in, so every paper, person and DOI is invented (10.5555 is Crossref's test prefix). Nothing has been shipped or submitted.

What changed: Save buttons are on in every site from install (no switch to press), with "Save buttons on all sites" and "This site" switches in Settings; the window is a header (refresh, settings, close), the page's paper with one "Save to Thesis Copilot" button, and the signed-in account at the bottom with "Open Thesis Copilot" and a menu.

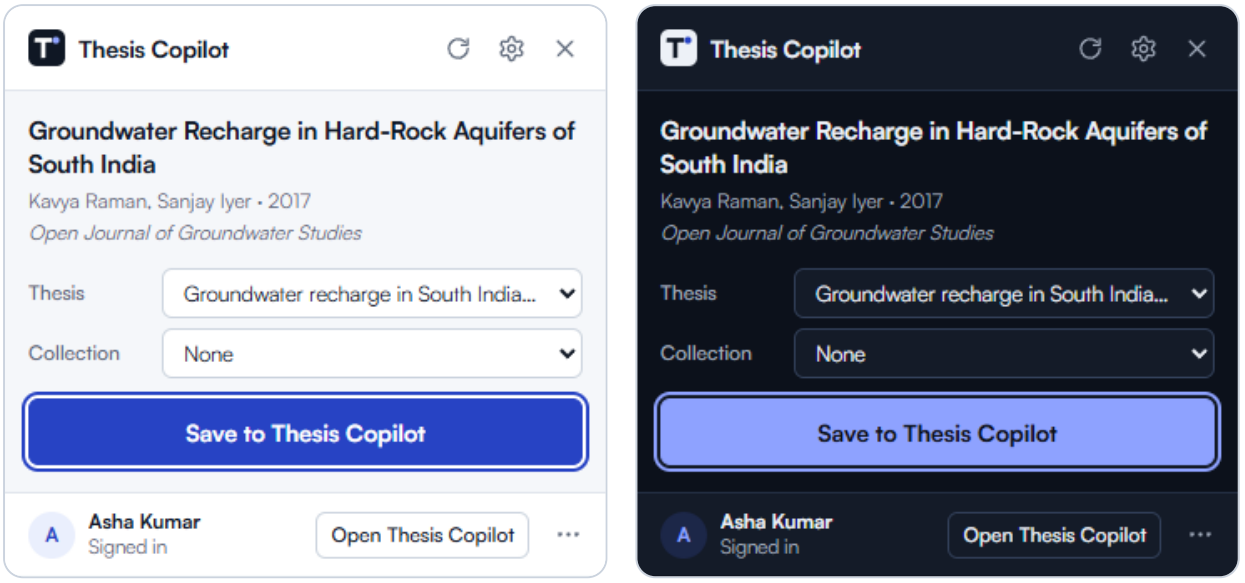

The fresh-install check

The production build, loaded into a new Chromium profile; no switch pressed, nothing stored: **PASSED** (version 0.4.0; every-site access held at install: true).

Wikipedia references

Rooftop solar in villages

Rooftop systems spread fastest where installers offered credit.[1] A later survey disagreed (see this survey).
